Product Page Intro	Soyabean, Partially Hydrogenated (32) is a solid fat that is made from soybean oil. Soybeans were introduced to Europe and North America in the 18th and 19th centuries, and soybean oil gained popularity as a cooking oil in the United States during the early 20th century. Today, it is one of the most widely consumed vegetable oils globally. Soyabean, Partially Hydrogenated (32) is partially hydrogenated, which means that some of the double bonds in the fatty acid chains have been broken and replaced with hydrogen atoms, making the oil more solid and giving it a longer shelf life. Soyabean, Partially Hydrogenated (32) is used in a variety of food products, including margarine, shortening, and baked goods, as well as in some cosmetic and personal care products.
